

Formula 1 Performance Insights (1950–2024)

Comparing Race Strategy, Speed & Points of Top 5 Drivers

Objective
This dashboard analyzes whether starting grid position, fastest lap time performance, and race consistency impact final point outcomes among the top five Formula 1 drivers.

Key Questions

- Does starting grid position influence final race results?
- Which driver consistently scores the most points per race?
- How do fastest lap times affect performance and strategy?

Starting Grid vs Final Race Position (Colored by Driver, Sized by Points)

Drivers starting in better grid positions generally finish higher. Larger bubble size indicates more points earned.

Fastest Lap Time Trend (Top 5 Drivers)

Faster lap times are lower values. The trend displays consistency and improvement across races.

Conclusion

- Starting position strongly predicts race outcome
- Verstappen scores the most consistent points across races
- Fastest lap time does not guarantee victory
- Top 5 driver comparisons reveal performance patterns over time

Top 5 Drivers – Points per Race

Shows how points vary race-by-race for each top driver. Peaks indicate dominant performances.

Starting Grid vs Final Points — Top 5 Drivers

Compares starting grid to final points earned. Shows how strong starting positions convert to points.
